You've got the power

INTRODUCTION TO SQL SERVER

John MacKintosh Instructor

CRUD operations

CREATE

- Databases, Tables or views
- Users, permissions, and security groups

READ

• Example: SELECT statements

UPDATE

Amend existing database records

DELETE

CREATE

- CREATE TABLE unique table name
- (column name, data type, size)

```
CREATE TABLE test_table(
  test_date date,
  test_name varchar(20),
  test_int int
)
```

A few considerations when creating a table

- Table and column names
- Type of data each column will store
- Size or amount of data stored in the column

Data types

Dates:

- date (YYYY-MM-DD), datetime (YYYY-MM-DD hh:mm:ss)
- time

Numeric:

- integer, decimal, float
- bit (1 = TRUE, 0 = FALSE. Also accepts NULL values)

Strings:

• char, varchar, nvarchar

Let's create some tables!

INTRODUCTION TO SQL SERVER

Insert, Update, Delete

INTRODUCTION TO SQL SERVER

John MacKintosh Instructor

INSERT

```
INSERT INTO table_name
INSERT INTO table_name (col1, col2, col3)

INSERT INTO table_name (col1, col2, col3)
VALUES
   ('value1', 'value2', value3)
```

INSERT SELECT

```
INSERT INTO table_name (col1, col2, col3)
SELECT
   column1,
   column2,
   column3
FROM other_table
WHERE
   -- conditions apply
```

- Don't use SELECT *
- Be specific in case table structure changes

UPDATE

```
UPDATE table
SET column = value,
WHERE
   -- Condition(s);
```

• Don't forget the WHERE clause!

```
UPDATE table
SET
   column1 = value1,
   column2 = value2
WHERE
   -- Condition(s);
```

DELETE

DELETE
FROM table
WHERE
-- Conditions

• Test beforehand!

TRUNCATE TABLE table_name

Clears the entire table at once

Let's INSERT, UPDATE, and DELETE!

INTRODUCTION TO SQL SERVER

Declare yourself

INTRODUCTION TO SQL SERVER

John MacKintosh Instructor

Variables

```
SELECT *
FROM artist
WHERE name = 'AC/DC';
```

Now change the query for another artist:

```
SELECT *
FROM artist
WHERE name = 'U2';
```

To avoid repetition, create a variable:

```
SELECT *
FROM artist
WHERE name = @my_artist;
```

DECLARE

DECLARE @

Integer variable:

DECLARE @test_int INT

Varchar variable:

DECLARE @my_artist VARCHAR(100)

SET

Integer variable:

```
DECLARE @test_int INT

SET @test_int = 5
```

Assign value to @my_artist:

```
DECLARE @my_artist varchar(100)

SET @my_artist = 'AC/DC'
```

```
DECLARE @my_artist varchar(100)
DECLARE @my_album varchar(300);
SET @my_artist = 'AC/DC'
SET @my_album = 'Let There Be Rock' ;
SELECT --
FROM --
WHERE artist = @my_artist
AND album = @my_album;
DECLARE @my_artist varchar(100)
DECLARE @my_album varchar(300);
SET @my_artist = 'U2'
SET @my_album = 'Pop';
SELECT --
FROM --
WHERE artist = @my_artist
```

AND album = @my_album;

Temporary tables

```
SELECT
  col1,
  col2,
  col3 INTO #my_temp_table
FROM my_existing_table
WHERE
  -- Conditions
```

#my_temp_table exists until connection or session ends

```
-- Remove table manually

DROP TABLE #my_temp_table
```

Let's declare some variables!

INTRODUCTION TO SQL SERVER

Congratulations!

INTRODUCTION TO SQL SERVER

John MacKintosh Instructor

What we learned...

- Selecting: SELECT
- Ordering: ORDER BY
- Filtering: WHERE and HAVING
- Aggregating: SUM, COUNT, MIN, MAX and AVG
- Text manipulation: LEFT, RIGHT, LEN and SUBSTRING

What we learned (II)...

- GROUP BY
- INNER JOIN, LEFT JOIN, RIGHT JOIN
- UNION and UNION ALL
- Create, Read, Update and Delete (CRUD)
- Variables
- Temporary tables

Next Steps

- Intermediate SQL Server
- Joining Data in SQL

Congratulations!
